

Have you ever felt like no one understands you?

**That's a harsh reality for those stroke survivors who have aphasia:
A reality they must face everyday.**

“Aphasia is an impairment of the ability to use language (production and comprehension) usually acquired as a result of a stroke or other brain injury.”

(go to aphasia.org for more information)

Who are we:

The Laboratory for Research on Aphasia and Stroke directed by Dr. Tracy Love

Two Locations for your convenience:

University of California, San Diego in La Jolla
Alvarado Medical Center (Near San Diego State University)

We are looking for individuals without a history of brain injuries between the ages **40** and **85** to take part in our many research projects.

Those who participate:

- Will help further our study of language difficulties that people experience after suffering a stroke. You will help us with our goal of providing the community with a more detailed understanding of how the brain processes input which will help in the rehabilitation of stroke survivors.
- Participate in at least 5 testing sessions, each lasting approximately 60 minutes, in a comfortable, friendly environment
- Will be compensated \$15 for time and travel each visit

**If you have questions, or are interested in participating,
Please contact us at either UCSD at (858) 534-7356 or SDSU at (619) 594-7880**

**You can also visit our website at:
<http://psy.ucsd.edu/lcn/LRAS/Research.htm>**

Thank you for your time!
